

Detailing in Revit is for experienced users that will be creating construction details in Revit. Students will learn to “re-use” AutoCAD details in Revit projects, create construction details directly in Revit, and how to save standard details in a library for later use in other projects.

Prerequisite: Basic knowledge of Windows Operating System, Revit Fundamentals and basic understanding of architectural design concepts.

Visit mwcad.com for a complete class schedule or call us at 800-279-3221.

What students are saying about our courses:

“I very much enjoyed the Revit classes that I took with MWC. They were informative and at a good level of difficulty. The instructors had a great knowledge of their subject matter and were able to answer questions that I had. I look forward to implementing what I have learned as we make the transition. Thank you for providing good quality teachers and training.”
- Jeff Ballantyne,
